

What about sugar?

Last Updated Utorak, 21 Listopad 2008

Sugar plays a harmful role in tooth decay. The bacteria that form together to become plaque use sugar as a form of energy.

They multiply faster and the plaque grows in size and thickness. Some of the bacteria turn the sugar into a kind of glue that they use to stick themselves to the tooth surface.

This makes it harder for the bacteria to get washed away with your saliva.
